

## Emergency Asset Support Spares and Cable Club

### Commercial Engineering Services

**National Grid stores is a dedicated facility for the management and distribution of extensive stocks and strategic spares.**

Many of these spares are no longer supported or produced by the original equipment manufacturers, or they are subject to long lead times from the suppliers.

For many years we have offered customers emergency access to our National Grid stock of spares on a 24 hour, 365 day a year basis as part of strategic plans to maintain assets. This removes the need for customers to finance and maintain their own stocks.

The spares and cable services can be taken separately or as a combined access arrangement. Access to the spares is charged on an annual service membership fee, plus a charge for any items issued.

For details of these services see overleaf.

**High Voltage Engineering Specialists**  
A unique combination of experience and expertise

Incident  
Response

## Spares

We keep a comprehensive range of high voltage components including transformers, tap changers, cable, switchgear, protection, larger spares and overhead line spares in tailored environmental conditions at our Didcot stores.

Our instant access service and UK-wide fast delivery, including overnight or same day service, reduces asset restoration to the shortest possible time. In the instance that a spare is not available, our technical experts can assist with looking at the compatibility of alternative spares, supporting your aims of minimising downtime and protecting your valuable revenue stream.

## Cables

We manage emergency strategic stock of oil filled and XLPE cables covering 132kV to 33kV voltages along with associated accessories and joints.

We provide 24 hour technical support to all Club Members with the cable and associated spares providing a valuable national strategic resource which avoids the need for individual customers to hold their own stocks.
